The U-CONTROL UMX490 is an extremely versatile, 49-Key USB/MIDI master keyboard controller that is ideally-suited for a wide range of performance and recording applications. Need independent control of hardware synthesizers or general MIDI sound modules? How about control over effects devices? Maybe you just want to operate sequencing software, or computer plug-ins from a more convenient remote location? The UMX490 provides total flexibility and tremendous ease of use, thanks to its 49 full-size keys, 22 independently-assignable controllers – and MIDI output.

Add it all up, and the UMX490 gives you the kind of control needed to realize your ideas quickly and intuitively. And we even sweeten the deal, by including our best-selling UCA222 USB/Audio interface – for plug and play recording directly to your PC or Mac* computer!

What is a MIDI Controller?

Simply put, a MIDI controller gives you the power to take command of any hardware device or software that understands MIDI (Musical Instrument Digital Interface). This means that MIDI addressable effects processors (such as delays, reverbs, etc.) and audio recording and editing software can be controlled with a single piece of hardware, a MIDI controller. This can be very handy indeed when you have lots of devices spread all around your workspace or stage.

Velocity-Sensitive Keys

Every UMX490 controller features our custom-designed, velocity-sensitive key-bed, which has been praised by the industry's top product reviewers and players alike, for its responsiveness and playability.

Recording & Editing Toolkit

To get you up and rockin' right away, we've included a free download for some popular and easy-to-use recording, editing and podcasting software, plus more than 100 virtual instruments and 50 effects plug-ins. Jam with a virtual e-piano or take off with breathtaking synthesizer sounds, or tweak your sounds with classic-style tube amps and multi-FX – plus high-end studio reverbs, equalizers, compressors, choruses and much more.

More than MIDI

As an added bonus, we've included our **UCA222** USB/Audio Interface for plug and play recording directly to your PC or Mac* computer. You can use the **UCA222** to connect sound modules directly to any free computer USB port, and listen to either the direct input, or the low-latency output signal via your headphones or active studio monitors. The **UCA222** also has an additional S/PDIF optical output for direct digital conversion and is completely powered via USB – no external power supply needed. With the **UCA222**, you can connect virtually any line-level device instantly to your computer – including mixers or tape decks.

22 Assignable Controllers

When it comes to remote control, you get 8 knobs, 10 assignable switches, 2 wheels (Pitch Bend & Modulation), 1 pedal port and 1 fader, for a total of 22 assignable controllers – which means total control of your operating environment. Once you've assigned the parameters for a particular scenario, simply store it in your user preset. Controller assignment is ultra-easy, providing real-time control of FX parameters and DAW functions – all right at your fingertips. And the octave shift function allows you to perform over a full 128 tone range!

Why You Need a UMX Controller

- Playing external sound modules, rack synthesizers and virtual instruments
- Editing sound parameters of synthesizers, sound samplers and GM/GS/XG sound generators
- Controlling parameters on outboard equipment and software plug-ins, such as effects processors, compressors and digital equalizers
- Remotely controlling software mixers (functions for volume, pan, mute, etc.)
- Live control of volume and sound parameters of sound modules on stage
