

## AAF 1.0 Installer

---

On the Nuendo DVD and/or as part of a Nuendo update patcher an additional AAF installer is provided. This document describes when to use the installer and make use of the older AAF 1.0 functionality.

### **What is the AAF 1.0 installer?**

While the current AAF implementation of Nuendo (3.1 and higher) was done using the latest AAF Toolkit (version 1.1) all earlier implementations were done using the version 1.0 of the AAF toolkit. This installer allows you to add the previous (version 1.0) AAF functionality to your Nuendo installation.

### **When should I do this?**

When you are planning on EXPORTING AAF files from Nuendo 3.1 (or higher) to an application that has an AAF implementation built with version 1.0 of the AAF Toolkit (e.g. Pro Tools 6.4) you need to do this with help of the AAF 1.0 functionality. Please run the installer and use the AAF 1.0 export functionality.

You do NOT need to use the AAF 1.0 IMPORT functionality in order to import AAF files into Nuendo 3.1 which were exported from any application which uses the AAF 1.0 Toolkit (e.g. Pro Tools 6.4) since the current AAF functionality in Nuendo which is based on version 1.1 of the Toolkit grants downward compatibility upon import and can thus handle files that were created with either version 1.0 or version 1.1 of the AAF Toolkit.
