YAMAHA

DIGITAL PROGRAMMABLE ALGORITHM SYNTHESIZER Operating Manual

CONGRATULATIONS

Thank you for choosing the Yamaha DX7 Digital Programmable Algorithm Synthesizer. The DX7 employs unique and sophisticated FM digital tone generation technology combined with microcomputer control to permit creation of voices that are more "live" than voices available with any other system available.

We urge you to read this owner's manual thoroughly to ensure proper operation and maximum performance of the instrument.

- FEATURES

- The DX7 has a 32-voice internal memory, while external cartridges can be plugged in to provide an extra 96 voices, making a total of 128 voices available to the performer for instant selection.
- Extensive microcomputer programming control makes it possible to edit existing voices to change their character, or produce entirely new voices. New voices can also be created "from scratch."

 Edited or new voices can be stored either in the instrument's internal memory, or in an optional external memory cartridge, so sounds you create can be saved for future use.

PRECAUTIONS

LOCATION

Avoid placing your synthesizer in direct sunlight or close to a source of heat. It is also important to avoid locations in which the instrument is likely to be subjected to vibration, excessive dust, cold or moisture.

HANDLING

Avoid applying excessive force to the instruments's knobs and switches.

POWER CORD

Always grip the power plug directly when unplugging. Removing the power plug from the wall socket by pulling on the power cord can result in damage to or shorting of the power cord.

Be sure to unplug your synthesizer if you will not be using it for an extended period of time.

RELOCATION

When moving the synthesizer once it has been set up, be sure to disconnect all cords that connect to other equipment. This will help prevent accidental damage to or shorting of interconnection cables.

CONNECTION

Carefully follow the "CONNECTION" instructions given in this manual when setting up your synthesizer.

Connection errors can lead to serious damage to the instrument, amplifier, and speakers.

CLEANING

Do not use solvents such as benzine or thinner to clean your synthesizer as these may cause discoloration or staining of the instrument's exterior. Use a soft, dry cloth.

SAVE THIS MANUAL

After studying this manual thoroughly, it should be stored in a safe place for future reference.

LIGHTNING

In the event of an electrical storm, the instrument's power cord should be unplugged to eliminate the possibility of serious damage.

OTHER APPLIANCES

Use your synthesizer where its digital circuitry cannot be influenced by electromagnetic radiation from appliances such as televisions, radios, etc.

DX7 OUTLINE

As stated in the feature summary on page 1, the DX7 can be used to play pre-programmed voices, pre-programmed voices can be edited to alter their character, or completely new voices can be created from scratch. Newly created voices can be memorized for future use.

To accomplish all this, the DX7 has four main operating modes:

PLAY-MEMORY SELECT Mode

This is the normal performance mode, and the mode in which pre-programmed voices can be selected.

FUNCTION Mode

This mode permits setting parameters pertaining to the effect of the controllers (thumbwheel, foot controller, breath controller, key after touch) and is also used for loading and saving data.

EDIT Mode

This mode permits editing existing voice data to create new sounds as well as creation of entirely new voices.

STORE Mode

Edited or newly created voices can be programmed into the memory in this mode.

All functions of the DX7 are performed in one of the above modes. Proper understanding of the functions of each mode is the key to successful operation of and performance with the DX7.

1 VOLUME

This controls the output level of the DX7 and at the same time controls the volume of the headphones.

2 DATA ENTRY

This combination of keys and linear control is used to enter and modify data.

DATA ENTRY

This control is used for coarse value adjustment. This slide controller covers the entire range for each parameter from minimum to maximum.

3 MODE SELECT KEY

Selects the operating mode, "operators" (these will be explained later) and memory protect functions.

4 DISPLAY PANEL

This Liquid Crystal Display panel displays the parameters in each mode and the name of the selected pre-programmed voice.

Preset voice number display

Displays the current state of the system.

6 VOICE CARTRIDGE

External voice cartridges can be plugged into the receptacle in the DX7 panel. The DX7 is supplied with two ROM (pre-programmed) voice cartridges, each containing 64 voices. T

An optional RAM (user programmable) voice cartridge can contain 32 voices.

7 PITCH BEND WHEEL

The pitch bend range is set in the FUNCTION mode. The pitch bend wheel then permits upward and downward pitch bend throughout the set range.

5 VOICE/PARAMETER SELECT KEY

These keys select either the voices in the instrument's internal memory or those in an external voice cartridge. The same keys are also used to select parameters in the FUNC-TION or EDIT modes. One key can have a maximum of four different functions.

The function of these keys is determined by the MODE SE-LECT key.

8 MODULATION WHEEL

The modulation depth range is set in the function mode. The modulation wheel then permits variation of modulation depth throughout the set range.

9 KEYBOARD

The DX7 has a 61-key keyboard with 16-voice polyphonic capability (a monophonic mode is also selectable).

Initial/After Touch response provided.

CONNECTIONS

Setting Up and Applying Power

The DX7 does not have an internal power amplifier, therefore either headphones or an external amplifier/speaker system are required. A high-quality keyboard amplifier system is recommended.

Hook up your DX7 as shown in the diagram below.

Turn POWER ON

The DX7 power switch is located to the right of the rear panel (viewed from keyboard side). Turn the power switch ON only after all connections to other equipment (and to the AC supply) have been properly made. The display panel will appear as in the illustration below immediately after power is switched on.

After a few seconds, the same mode that was engaged before power was turned off is re-engaged. For example, if the PLAY mode was previously engaged, the PLAY mode will be re-engaged and the previously selected voice will be ready for performance. The same applies to the EDIT and FUNCTION modes.

PLAY MODE

Playing the Internal Voices

The DX7 has 32 internal voices, any one of which can be selected simply by pressing the <u>INTERNAL</u> key in the MEMORY SELECT group, and then by pressing the appropriate VOICE SELECT key.

Each VOICE SELECT key has a large numeral that corresponds to the voice number at its left edge.

Set the desired VOLUME level

With power to the DX7 and your amplifier system ON, gradually raise the volume control while playing a note on the keyboard until the desired volume level is reached. Set the volume control on your amplifier so the optimum volume is attained with the DX7 volume control set about "8".

Fine adjustment of volume while playing can be achieved using an optional FC-3A foot controller

Playing the Cartridge Voices

An extra 64 voices can be added to the available selection simply by plugging in one of the supplied external voice cartridges.

Insert a cartridge as shown in the figure.

Select the cartridge voices by first presseing the [CARTRIDGE] key in the MEMORY SELECT group, and then select the desired voice by pressing the appropriate VOICE SELECT key, just as in internal voice selection. Selection of cartridge voice groups A1 – A32 and B1 – B32 is accomplished using the selector switch on the cartridge.

The A voice bank, voices A1 through A32 of the cartridge memory can be used.

plugged into the VOLUME jack on the DX7 rear panel. Remember that the DX7 and amplifier volume controls should be set high enough that adequate volume control range is available using the foot controller.

Select the cartridge voices

and then press the voice select key corresponding to the number of the desired voice.

When data entry is initiated while in the PLAY mode, the parameter selected at the end of the FUNCTION mode can be controlled.

FUNCTION MODE

FUNCTION Mode Applying Effects

The FUNCTION mode permits tuning, pitch bend, modulation, and application of other effects while playing, as well as voice data load/save operations.

Press the FUNCTION key to enter the FUNCTION mode. Setting controller range parameters, etc., is carried out using the DATA ENTRY controls.

 Function parameters are memorized and maintained even when power to the DX is cut off. Unlike voice data, however, function parameters cannot be saved in internal or external memory.

MASTER TUNE

MASTER TUNE adjusts the overall tuning of the DX7 to match its pitch with other instruments. Pitch is variable over a 150 cent range. Press MASTER TUNE and then use the liner DATA ENTRY control for tuning.

RANGE:

The range of pitch bend can be set from 0 to 12. 0 range is equivalent to no pitch bend. A setting of 12 permits pitch bend over a \pm 1200 cent (2 octave) range. If the range is set at 7, then pitch bend will be possible over a \pm 700 cent range (i.e. plus or minus one fifth).

STEP:

The step parameter can be set from 0 to 12. A setting of 0 corresponds to 0-cent steps, and a setting of 12 corresponds to 1200-cent (1 octave) steps. If STEP is set to 0, then a perfectly smooth pitch bend will result. If STEP is set to 1, the pitch will bend in 100-cent (semitone) steps.

Pitch bend will not function if RANGE is set to 0.

5	5	6	6	7	7
MODE	_	GLISSA	NDO	TIME	

The portamento effect varies according to whether the DX7

POLY/MONO

Determines whether the DX7 will function in the polyphonic or monophonic mode. Press the DATA ENTRY -1 key for polyphonic operation, and the +1 key for monophonic operation.

 The range of the portamento effect is different in the polyphonic and monophonic modes. Refer to the POR-TAMENTO section below.

PITCH BEND

Two keys are used to determine the effect of the PITCH BEND thumbwheel.

is in the polyphonic or monophonic mode.

MONOPHONIC MODE:

Press the DATA ENTRY +1 key to activate "FULL TIME PORTA." In this mode portamento is always applied.

POLYPHONIC MODE:

Press the DATA ENTRY -1 key to activate "SUS-KEY P RETAIN." In this mode the pitch of keys released while the sustain pedal is on or of notes that have a long sustain time does not change. However, portamento is effected between two subsequently pressed keys.

Press the DATA ENTRY +1 key to activate "SUS-KEY P FOLLOW." In this mode the pitch of a key released while the sustain pedal is held slides (portamento) to a previously pressed key. There is no change with continuously pressed keys.

GLISSANDO:

The glissando function is turned either ON or OFF. When it is OFF a normal portamento effect is produced.

TIME:

Adjusts the speed of the portamento/glissando effect from 0 to 99. A 0 setting results in no effect, while a setting of 99 produces the longest (slowest) portamento or glissando. The portamento/glissando effect can also be turned ON or OFF using an optional FC-4 or FC-5 foot pedal once the portamento/glissando function has been turned on using the front-panel controls.

Pressing the foot pedal turns the effect ON. The effect is OFF when the foct pedal is released.

 An FC-4 or FC-5 foot pedal can also be connected for sustain pedal control. In the monophonic mode, a key pressed while another key is held will take priority, and the sustain effect will apply to the new key.
 Releasing the pedal turns the sustain effect OFF.

EDIT RECALL

9	9
-	

EDIT RECALL

This function makes it possible to recall a voice that was previously being edited or created.

If, for example, the PLAY mode is accidentally or purposely entered while editing, the voice that was being edited can be recalled with this function

If the EDIT RECALL key is pressed, the display shows "EDIT RECALL?". Pressing the DATA ENTRY YES key then causes the "ARE YOU SURE?" display. Verify by pressing the YES key again, and the voice previously being edited will be restored.

VOICE INIT (Voice Initialize)

BATTERY CHECK

A backup battery power supply is built into the DX7 so that voice data will be maintained even when power to the instrument is off. The state of the backup system can be checked by pressing the <u>BATTERY CHECK</u> key. The operational battery voltage range is from 2.2 volts to 3 volts. If the backup battery voltage drops below 2.2 volts, replacement of the backup system is necessary. The backup system consists of special batteries which can be replaced only by a Yamaha dealer. Contact your nearest Yamaha dealer when replacement becomes necessary.

CARTRIDGE

15 🕫	16	F
SAVE	LOAD	-
CARTRIDGE		

SAVE:

32 voices contained in the internal memory system can be saved on an external programmable memory cartridge. LOAD:

32 of the voices contained in an external voice cartridge can be loaded into the internal memory at a time.

 Refer to the STORE/SAVE/LOAD section on page 19 for detailed instructions.

10

VOICE INIT

This function sets up the basic voice data for creating new voices. Press the VOICE INIT key and the display panel will read "VOICE INIT?" Press the YES key and the DX7 will respond with "ARE YOU SURE?" Verify by pressing the YES key second time. This sets up the basic voice data and activates the DX7 EDIT mode.

CARTRIDGE FORMATTING

11 ^

Since the format of a RAM cartridge used for other purposes such as DX1 performance memories, etc., will vary from that of a cartridge used for voice memory, make sure you observe the following procedure when storing or saving DX7 internal voices into such a cartridge.

Press "11" to select this function. The "CARTRIDGE FORM?" display will appear. Press YES and the instrument will respond with "ARE YOU SURE?". Press YES again and all 32 memorybank in the RAM cartridge are initialized to the basic voice data.

MODULATION WHEEL/FOOT CONTROLLER/ BREATH CONTROLLER/AFTER TOUCH

G 18	н 19	20	J
PITCH	AMPLIT	UDE EG BIA	3
ION WHEEL			
к 22	L 23	м 24	ħ
PITCH	AMPLIT	UDE EG BIA	s
TROL			
o 26	P 27	° 28	R
PITCH	AMPLITU	DE EG BIAS	3
ONTROL	1.1.1.1	16	
s 30	т 31	u 32	٧
	PITCH ION WHEEL K 22 PITCH NTROL 0 26 PITCH ONTROL	PITCH AMPLIT	PITCH AMPLITUDE EG BIAS

The modulation wheel, foot controller, breath controller or keyboard after touch can be used to control LFO modulation depth applied to pitch, amplitude or envelope producing controllable tremolo or vibrato effects while playing. Setting the RANGE, AMPLITUDE and ENVELOPE GENERATOR BIAS parameters for each controller is basically the same process, so we'll concentrate mainly on the MODULATION WHEEL.

1. MODULATION WHEEL RANGE:

Range can be set from 0 to 99. No effect is produced with a 0 setting, and a setting of 99 produces maximum effect.

- PITCH, AMPLITUDE and EG BIAS).
- BREATH (Breath controller)
- * AFTER (After touch)

PITCH:

Determines whether LFO modulation is applied to pitch. Pitch is modulated if ON, and not modulated if OFF. AMPLITUDE:

Determines whether LFO modulation is applied to amplitude. Amplitude is modulated if ON, and not modulated

2. FOOT CONTROLLER

The LFO modulation effect programmed can be controlled using an optional FC-3A foot controller.

Maximum effect is produced by pressing the foot controller all the way down, while raising the controller fully eliminates the effect.

3. BREATH CONTROLLER

The LFO modulation effect programmed can be controlled using an optional BC1 breath controller. The effect is controlled by blowing into the BC1 mouthpiece. The effect will not be audible unless breath is applied to the controller.

if OFF.

EG (ENVELOPE GENERATOR) BIAS:

When EG BIAS is ON, volume or brilliance (wow) variation effects can be added with the controllers by varying the level of each operator's envelope generator. MOD, SEN-SITIVITY (AMPLITUDE) is used to set the sensitivity (refer to page 14).

Applying EG BIAS to a modulator results in brilliance effects, while applied to a carrier it results in volume variation effects. In some cases, if the carrier sensitivity is maximum and the controller is set to its minimum, no sound will be produced.

 These parameters will have no effect if the PITCH MODULATION SENSITIVITY or the AMPLITUDE MODULATION SENSITIVITY of the voice used are zero.

Refer to the MODULATION SENSITIVITY section on page 14 for details.

4. AFTER TOUCH

This feature makes it possible to vary the degree of modulation by varying pressure on the keys. No effect is produced with normal key pressure, but the effect can be introduced by pressing harder on the key(s). The amount of pressure applied determines the depth of the effect.

FM TONE GENERATION

FM Tone Generation Understanding the Basics

The DX7 is an entirely new type of synthesizer employing an entirely new FM digital tone generation system. This unique Yamaha system permits finer control over subtle musical nuances and vastly expanded voice creation potential compared to conventional synthesizers.

1. The Meaning of FM

FM stands for Frequency Modulation. FM radio broadcasts use the same principle. One signal-the modulator-modulates a second signal-the carrier.

In FM radio the carrier is an extremely high "ratio" frequency and the modulator is the music signal to be bracdcast. In effect, the carrier "carries" the modulator signal through the atmosphere to your receiving antenna.

FM broadcasting

Sound signal

(modulator signal)

2. FM Tone Generation In the DX7

In the DX7, the carrier signal determines the pitch of the note produced and modulator determines the shape of the waveform produced and therefore its timbre. This explanation may make it look like the carrier and modulator are two entirely separate things. In fact, they are one and the same. A special oscillator unit called an "operator" can be used as either a carrier or modulator in the DX7.

1) Pitch Frequency Data

Pitch frequency data from the DX7's microcomputer system determines the operator's oscillation frequency. When the operator is used as a carrier, this frequency is equivalent to the pitch of the note produced. When the operator is being used as a modulator, the ratio of its frequency to that of the carrier determines the timbre of the note produced.

2) Modulation Data

This is the modulation data received from the previous

Loose wave Dense wave signal.

The FM tone generator system is similar in principle, but in this case both the carrier and modulator are audible signals, and their frequencies can be almost equal.

FM tone generation

Carrier (sound to be modulated) Modulator

(modulator signal)

FM sound (modulated sound)

Close carrier/modulator frequency ratio results in FM sound. operator's (modulator) output.

3) Envelope Data

When the operator is used as a carrier the envelope data determines the volume envelope of the note produced. When the operator is used as a modulator the envelope data determines the timbre envelope of the note produced.

. .

For example, the pitch frequency data applied to an operator used as a carrier determines the frequency of the sine wave output from the operator. Inputting envelope data results in an output waveform similar to that shown in the figure.

Basic Operator Functions

1) Relationship of Carrier to Modulator

An operator can be used as either a carrier or modulator. These two basic operator functions are the basis for the FM tone generation system. Two operators can be combined in two different ways.

1. Modulator and carrier combinations

2. Carrier and carrier combinations

2) Carrier and Carrier

This configuration results in a pure sine wave output from both operators. The combination of these waveforms can sound much like a conventional organ.

· Carrier and carrier combinations

3) Modulator and Carrier

In the modulator/carrier configuration using two operators, shown in the figure, the operator on the left is the modulator and the operator on the right is the carrier. In the FM system, the last operator in a chain of two or more operators is the carrier. By varying the ratio of the modulator and carrier frequencies, and by varying the envelope of the modulator, an extremely broad range of highly complex waveforms (complex harmonic structure) can be created.

Modulator and carrier combinations

3. Algorithms . . . Combining Several Operators

The DX7 has a total of six operators. The way in which these operators are combined is known as an "algorithm." The DX7 has 32 different pre-programmed algorithms. The 32 algorithms are displayed graphically along the top of the control panel above the selector keys. Taking algorithm number one as an example, the lowest two operators-1 and 3-are carriers. The four operators above the carriers will function as modulators. The output of operator 6 is fed back (feedback) to its input.

The above is a brief description of the internal workings of the FM tone generator system. By varying the pitch frequency, modulation and envelope data it is possible to edit pre-programmed voices or to create entirely new voices.

 $\langle | | \rangle$

EDIT MODE

EDIT MODE Creating Voices

The EDIT mode can be used to edit pre-programmed voices or to create entirely new voices. Press the EDIT/COMPARE function key to enter the EDIT mode.

Setting and modifying parameters is carried out using the DATA ENTRY controls just as in the FUNCTION mode. A small dot will appear next to the voice number in the display if any data is modified. The original voice can be recalled at any time while editing by pressing the EDIT/COMPARE | key again. The preset number will flash indicating that you are hearing the original voice. To continue editing press the EDIT/COMPARE button

OPERATOR ON-OFF:

6 will result in the Pressing keys through 1 corresponding operator being turned OFF, indicated by a "O" in the appropriate location on the display panel (the group of six 1's and/or O's corresponds to operators 1 through 6). Press the key again to turn the operator back on-indicated by a "1" on the display.

 No sound will be produced if the carrier operators have all been disabled.

EG COPY:

This function copys the EG data from one operator to another. While holding the selector STORE key, press the number of the operator from which you want to copy EG data.

OPERATOR ON-OFF/EG COPY

OPERATO	R ON-OFF/E	G COPY		and the second		
1	2	3	4	5	6	
1	1 2	2 3	3 4	4 5	5 6	6

In the EDIT mode these keys permit turning any of the operators on or off, and copying the EG data of any operator to any other operator (EG COPY).

This key permits selection of one of the 32 algorithms. Press the DATA ENTRY [+1] key to increment (advance) the number of the selected algorithm, and the -1 key to decrement the algorithm number. The slide control can be used for large variations.

FEEDBACK

FEEDB	ACK
8	8
-	

One operator in each of the 32 algorithms has its output fed back to its input. This is the feedback operator. The amount of feedback applied can be adjusted over a range of 0 to 7. By increasing the FEEDBACK level the harmonics are increased, resulting in the generation of noise-like sounds.

SPEED:

The speed (frequency) of the LFO can be set from 0 to 99. 0 is the slowest LFO speed while 99 is the fastest.

DELAY:

This creates a delay between initial key closure and application of LFO modulation. A setting of 0 results in no delay-LFO modulation begins the instant a key is pressedand a setting of 99 creates the longest delay.

PMD (Pitch Modulation Depth):

Varies, over a 0 to 99 range, the depth of LFO modulation applied to pitch. A 0 setting produces no pitch modulation, and a setting of 99 produces maximum modulation.

The PMD function is separate from the effect of the controllers, and can be used to apply vibrato effects that are entirely independent of the controller settings.

AMD (Amplitude Modulation Depth):

Varies, over a 0 to 99 range, the depth of LFO modulation applied to amplitude. A 0 setting produces no amplitude modulation, and a setting of 99 produces maximum modulation.

The AMD function is separate from the effect of the controllers, and can be used to apply tremolo effects that are entirely independent of the controller settings.

SYNC (Synchronize):

Pressing the SYNC key alternately turns the SYNC function ON and OFF. When SYNC is ON LFO modulation beings at the same point in the LFO waveform when a key is pressed. With SYNC OFF LFO modulation begins at a random point in the LFO waveform since the LFO is free running in this mode.

	9 9	10 o	11 A	12 в	13 c	14 D
L	-		1. Sec. 1.	17 - E		

The Low Frequency Oscillator produces low-frequency sine, saw-tooth or square waves, or a SAMPLE/HOLD waveform. The LFO waveform can be used to apply vibrato, tremolo or " wow" effects to the voices. The amount of LFO modulation applied can be controlled using the modulation wheel, foot controller, breath controller or keyboard after touch once appropriate WAVE, SPEED, DELAY and KEY SYNC parameters are set.

(Refer to page 26)

WAVE:

LFO WAVE

This selects the waveform output by the LFO. Any of the six waveforms shown below can be selected.

4 111111 ALG LFO KEY SYNC=OFF This display will change When KEY SYNC ON When KEY SYNC OFF KEY ON KEY ON TRIANGL SAW DWN SAW UP SQUARE SINE

(13)

MOD. SENSITIVITY (Modulation Sensitivity)

MOD SENS			
PITCH	-	AMPLIT	JDE
15	E	16	F

This adjusts the sensitivity (depth) of pitch and amplitude modulation. This parameter must be greater than 0 before any amplitude or pitch modulation can be applied.

Be sure to check this parameter before using the modulation wheel or other controllers.

PITCH:

Sensitivity to pitch modulation is variable from 0 to 7. This value sets the modulation sensitivity for all operators. Applying pitch modulation results in vibrato type effects.

AMPLITUDE:

Sensitivity to amplitude modulation is variable from 0 to 3. Amplitude modulation sensitivity is set independently for each operator. Applying amplitude modulation to a modulator creates "wow" effects, while applied to a carrier it results in tremolo effects.

Operators are selected using the OPERATOR SELECT

OSCILLATOR

OSCILLATOR

MODE/ SYNC	FREQUENCY	FREQUENCY	DETUNE		
17 G	18 H	19 1	20 J		

These keys set the pitch data for each operator.

ALG 4 111111 OP2 FREQUENCY(RATIO) ALG 4 111111 OP2 FIXED FREQ.(Hz)

MODE/SYNC:

Pressing this key alternately switches to MODE and SYNC. MODE:

Pressing the DATA ENTRY -1 key sets the operators to the FREQUENCY (RATIO) mode, in which operator pitch is scaled to the keyboard as normal. Pressing the +1 key sets the FIXED FREQ (HZ) mode in which a fixed frequency is produced no matter what key is pressed. The frequency is set using the FREQUENCY COARSE and FREQUENCY FINE functions in both modes.

SYNC (Synchronize):

When the SYNC function is ON, all oscillator begin operation from the same phase angle (0 degrees). With SYNC OFF the phase angle at which an operator begins oscillation is carried over smoothly from the preceding note. In the polyphonic mode, for example, maximum simultaneous output is 16 notes. If a 17th key is pressed the first note makes a smooth transition to the 17th note.

key. Pressing the OPERATOR SELECT key succes-16 notes at once sively selects the operators in order from 1 to 6. The First note First note fades away number of the selected operator is displayed in the Second note upper right hand corner of the display panel. Operators that are turned OFF will be "skipped" and the number of the next active operator will be displayed. Sixteenth note OPERATOR SELECT Seventeen note When on, oscillation **KEY ON** will always begin Disabled operator cannot be selected from 0 phase Depress to select the operator ALG 4 0P2 0111 A MOD SENS. = Ø When off, a smooth transition occurs to the next note Next note-Previous note

FREQUENCY COARSE/FREQUENCY FINE:

If MODE is set to FREQUENCY (RATIO) the operators are set to a standard frequency of 1.00 (8 feet) when the PITCH COARSE key is pressed. The frequency can then be varied from by one half (0.5 times) to 32 times. FINE adjustment is possible over a range of from 1 to 1.99 times. If the frequency is increased by 2 times, for example, the pitch will increase by one octave.

If MODE is set to FIXED FREQ (HZ), COARSE adjustment is possible in four steps-1, 10, 100 and 1000. FINE adjustment is possible from 1 to 9.772 times.

The envelope generator determines how the amplitude (volume) or timbre (tone) of a note will vary over time. Envelope modulation of a modulator results in time-based timbre variations, while envelope modulation of a carrier produces amplitude variations.

The parameters which determine the "shape" of the envelope are RATE 1 through RATE 4 and LEVEL 1 through LEVEL 4. The RATE parameters determine how long it takes the envelope to reach one LEVEL from another. The envelope applied to each operator can be set individually, permitting an essentially infinite range of envelope combinations.

DETUNE:

The operator frequencies as determined by the FREQUEN-CY COARSE and FREQUENCY FINE controls can be detuned over a -7 to +7 range.

RATE:

Pressing the RATE key successively selects RATE parameters 1 through 4. Each RATE parameters can be set from 0 to 99. A 0 setting produces the longest (slowest) RATE, and a 99 setting produces the fastest RATE.

LEVEL:

Pressing the LEVEL key successively selects LEVEL parameters 1 through 4. Each LEVEL parameter can be set from 0 to 99. 0 is no output, while 99 is maximum level.

 Normally LEVEL 4 will be set at "0". In this case LEVEL 1 should be greater than "50" to ensure proper EG operation.

KEYBOARD LEVEL SCALING

KEYBOARD	LEVEL	SCALING	
the same of the sa	and the second second	the second se	_

BREAK POINT	1	CURVE		DEPTH	
23	м	24	N	25	0

Permits raising or lowering the EG levels for keys to the left and right of any key specified as the "Break Point". This is basically a highly advanced version of the keyboard follower function found on some conventional synthesizers, permitting much finer scaling control.

BREAK POINT:

The BREAK POINT key-the reference key for the scaling function-can be specified anywhere between A-1 and C8. CURVE:

Permits variation of the scaling curve to the left and right of the BREAK POINT key. Pressing the <u>CURVE</u> key alternates between R KEY SCALING and L KEY SCAL-ING displays. Four different curves are available, as shown in the figure.

DEPTH:

Varies the depth of each curve over a 0 to 99 range. A 0 setting results in a flat (no variation) curve, and a 99 setting produces maximum scaling depth.

OPERATOR

OPERATOR	٩	-	_
OUTPUT LEVEL		KEY VEL	
27	0	28	R

Permits setting the output level and touch response effect of each operator.

OUTPUT LEVEL:

Controls overall EG level, like the EG DEPTH controls in conventional synthesizers. OUTPUT LEVEL can be set between 0 and 99.

For example, if a specific operator is found to be unnecessary once a voice has been created, its output level can be set to 0.

 Since the OPERATOR ON-OFF function operates only in the EDIT mode and OPERATOR ON-OFF data is not stored in memory, the OUTPUT LEVEL of all unnecessary operators should be set to 0.

KEYBOARD LEVEL SCALING depth is also set to "0". Setting a large DEPTH value and either the +LIN or +EXP curve will result in output from the operator even if the operator's output level is set to "0".

In order to maintain the same total output level regardless of which algorithm is selected, the OUTPUT LEVEL of each carrier operator is initially set to 1/2 or 1/6

99

BREAK POINT

KEYBOARD RATE SCALING

The EG for each operator can be set for a long bass decay and short treble decay—as in an acoustic piano. RATE can be set from 0 to 7. depending on the configuration of the algorithm. For example, the OUTPUT LEVEL of operators 1 through 3 of algorithm 1 are set to 1/2, while operators 1 through 6 of algorithm 32 are set to 1/6.

KEY VELOCITY SENSITIVITY:

Permits adjustment of key touch response. That is, how the velocity with which the keys are played affects the sound. Since touch responce can be applied to carriers or modulators, variations in timbre as well as level can be produced. Sensitivity can be set from 0 to 7. No touch response will be produced with a 0 setting, while a setting of 7 produces maximum response.

PITCH EG

_
r

PITCH EG permits variation of pitch by ±4 octaves either side of standard pitch (50). The RATE and LEVEL parameters of the PITCH EG can be set just as in the other DX7 envelope generators.

RATE:

Pressing the RATE key successively selects RATE parameters 1 through 4. Each RATE parameters can be set from 0 to 99. A 0 setting produces the longest (slowest) RATE. and a 99 setting produces the fastest RATE. LEVEL:

This value will change

KEY TRANSPOSE

TRANSPOSE 31 U

Transposes pitch over a ±2 octave range in semitone steps with C3 as standard, Press the KEY TRANSPOSE , and then the keyboard key corresponding to the desired amount of transposition according to the illustration on page 18. To transpose up one octave, for example, press the KEY TRANSPOSE key and then press C4 on the keyboard.

VOICE NAME

Name for original voices can be specified using up to ten characters. Characters are chosen from those printed in small type to the right of the MODE SELECT and VOICE/ PARAMETER SELECT keys. The available characters are 1 through 0, A through Z, -, a period and a space. When the VOICE NAME key is pressed, a cursor appears over the first character of the current voice name. Input the new name by pressing the buttons with the appropriate characters printed to the right of the button while holding the CHARACTER button.

Pressing the LEVEL key successively selects LEVEL parameters 1 through 4. Each LEVEL parameter can be set from 0 to 99.

With a setting of 50 as standard, a setting of 99 permits +4 octaves pitch variation while a setting of 0 permits -4 octaves pitch variation.

Set LEVEL 1 through LEVEL 4 to 50 to defeat the PITCH EG function.

cursor can be moved

KEY TRANSPOSE

STORE/SAVE/LOAD

STORE/SAVE/LOAD ... Storing the Voice Data

With the DX7, voices you create can be stored in the internal memory or an external memory cartridge. You can also save all the internal voices in a cartridge. In addition, you can load all the voices in a cartridge into the internal memory.

1. Memory Protect Protecting Your Work

The DX7's internal MEMORY PROTECTION function will prevent any accidental erasure of the INTERNAL or CARTRIDGE voice data. In addition, the voice cartridge itself has a protection switch so that the data is doubly protected. You will first have to turn the DX7 MEMORY PROTECT OFF in order to STORE/SAVE/ LOAD the voice data. Also, do not forget to turn the MEMORY PROTECT function back ON after the STORE/SAVE/LOAD operation.

The Voice Cartridge Protection Switch

This switch is used for protecting the voice data contained in the cartridge, even if the CARTRIDGE PRO-TECTION function of the DX7 is turned off. The only time this protection switch should be turned off is when you wish to store or save voices in the cartridge. In all other cases this PROTECTION switch should be turned on.

MEMORY PROTECT

Note: If you save contents of the DX7's internal memory or newly-created sounds in a cartridge that is already full, the previous cartridge contents of that particular preset number will be erased from the memory and the new voice data will replace it. Be sure to save new voice data in preset numbers that are empty or that are no longer needed.

2. Storing Newly Created Voices

Newly created original sounds can be erased by selecting other preset voices or disconnecting the power supply. Please store any voice data that you wish to keep in the internal memory or in a voice cartridge.

3. Saving Internal Voice Data

You can save the entire data contents of the internal memory in a separately available blank cartridge. This will open up the internal memory for original voices and will allow you to increase the number of voices available. If you should decide that all of the voice data contained in the cartridge is unwanted, the entire contents of the internal memory can be transferred to the cartridge. You'll then have an entirely new voice cartridge. For this procedure, turn the protection switch of the cartridge off.

Asking if you want to SAVE all data (if MEMORY PRO-TECT is ON at this time, the "MEMORY PROTECTED" display appears and SAVE will not function).

The internal microcomputer asks "SAVE MEMORY, ARE YOU SURE?" to prevent accidental erasure of important voice data in the RAM cartridge. Check to see that the RAM cartridge inserted in the instrument does not contain important voice data, then press YES once more. The "UNDER WRITING" display appears and the save operation begins (if the PROTECT switch on the RAM cartridge is ON at this time, a "WRITE ERROR" message will be displayed and the save operation will be terminated).

When the SAVE operation is finished, the "COMPLETED" massage will appear. MEMORY PROTECT should now be turned ON.

Turn the protection switch of the internal memory off.

Asking if you want to LOAD all data (if MEMORY PRO-TECT is ON at this time, the "MEMORY PROTECTED" display appears and LOAD will not function).

this display appears.

The microcomputer asks "LOAD MEMORY, ARE YOU SURE?" to prevent accidental erasure of important voice data in the instrument's internal memory. If it's OK to LOAD, press YES a second time and wait for the "COM-PLETED" display. MEMORY PROTECT should then be turned ON.

This display appears when SAVE is finished.

Note: If a "FOARMAT CONFLICT", "ID CONFLICT", or "READ PROTECT" message is displayed during a STORE or SAVE operation using a RAM cartridge, it means the cartridge must be formatted. For details, please refer to the Cartridge Formatting section on page 7.

4. Loading Cartridge Data

You can load all the contents of a cartridge into the internal memory of the DX7. First, insert the cartridge that contains the voice data that you wish to load.

this display appears indicating that LOAD has finished.

Let's keep records of voices for future reference.

At the end of this manual you will find a voice data list. Use this list to record the values of every parameter used. Make copies of this list and use them to record the parameters of any new voices you create yourself. This will be useful to restore voices that have been erased, and will serve as an excellent guide for creating new voices.

(20)

MIDI

MIDI (Musical Instrument Digital Interface)

The MIDI terminal is for external control of electronic musical instruments. Any instrument equipped with a MIDI terminal can be connected using the MIDI cable and used for transmitting data to or from the instrument.

MIDI can be used for the following types of data transmission and control:

Real-Time Control

This is used for controlling more than one electronic musical instrument at once using a sequencer to form a musical ensemble. It can also be used to control a second electronic musical instrument via the keyboard of the main instrument.

- 1. Key pitch ON/OFF, etc.
- 2. Pitch bend, modulation wheel, sustain switch, etc.
- 3. Voice number.

Connecting the MIDI Cable

THRU IN IN OUT THRU IN OUT IN AUTO RHYTHM COMPUTER/ SYNTH B SYNTH A CH 3 SEQUENCER CH 2 CH 1 Fig. 1

As can be seen in figure 1, the data output from the se-

System Information

Certain types of data can be transferred between certain groups of instruments of the same manufacturer.

The following types of data can be exchanged using the YAMAHA DX7 and/or DX9.

- 1. Data for one voice or for all voices.
- 2. The data for a single parameter within a certain voice.
- 3. The data for a single parameter within the FUNCTIONS.

quencer is transmitted via a single MIDI cable and input to synthesizer A, where it is sent to the next instrument to be controlled via the THRU terminal. In this case, the sequencer is outputting multi-channel data. Therefore, the desired channel number on the receiving side must be selected accordingly. Both the sending side and the receiving channel numbers will have to be specified with the system shown in figure 2.

Selecting the Receiving Channel

While the unit is in the FUNCTION mode, pressing solution will produce the display shown in the figure. The selection of the MIDI receiving channel number can be carried out using the DATA ENTRY controls. Select system information YES/NO for both the receiver and the transmitter. Pressing solution will produce the display "SYS INFO UNAVAIL". Press - to change this to "AVAIL", and the instrument will enter the system information transmit/ receive mode.

USING MIDI.

Real-Time Control

Sequencer Controlled Automatic Performance
 With the system shown in figure 1, let us use the DX7 as
 synthesizer A, and the DX9 as synthesizer B. Specify the
 DX7 receiving channel as 1, and the DX9 receiving chan nel as 2. This will enable automatic performance under
 sequencer control.

2. Remote Control Performance

Hooking up the remote keyboard KX1 to a DX7 as shown in the figure, will enable you to remotely control the DX7 from the KX1 keyboard. In addition, by connecting a DX7 and a DX9, the DX9 can be controlled from the DX7 keyboard. The DX7's send channel number should also be specified as 1.

Transmit System Information

1. Transmit Single Voice Data

2. Transmit Voice Data for All 32 Voices

Press **a** when the display appears as shown in the upper area of the figure. The display will change to that shown in lower area of the figure. Pressing - - will cause the voice data for all 32 voices to be output from MIDI OUT.

- 3. Transmit Voice or FUNCTION Parameters When the display reads "SYS INFO AVAIL", press either
 - EDIT or FUNCTION. Pressing the key corresponding to the parameter that you wish to transmit will output the data for that parameter from MIDI OUT.
- Note: For all of the above, the transmit channel number of the DX7 is 1.
- Receiving System Information

When the display appears as shown in the figure, press either INTERNAL or CARTRIDGE. Then press the voice number key for the voice you wish to send. The corresponding voice data will be output from MIDI OUT.

in this condition

Press the voice number key for the voice you wish to send. Select the same number for both the receive and the transmit channels. When the display reads "SYS INFO AVAIL", the instrument will be ready to receive system information.

1. Receiving Single Voice Data

First, Set the INTERNAL MEMORY PROTECT to OFF. When single voice data is received, the panel displays the message "INTERNAL VOICE" and the received voice name, the first character of which will flash.

Receiving the Voice Data for All 32 Voices Switching the PROTECT off for the INTERNAL memory, will cause the voice data for all 32 voices to be memorized into the internal memory.

Receiving Voice or FUNCTION Parameters When receiving this information, the unit will vary the data for that particular parameter.

LET'S ACTUALLY CREATE A VOICE

EDIT OPERATION

Using the EDIT mode of the DX7, you can modify the preprogrammed voices or even create your own original voices.

1. Modifying a pre-programmed voice

- First, select the pre-programmed voice you wish to modify. Select either the internal or cartridge memory, and then the preset number 1 to 32.
- 2) Enter the EDIT mode by pressing the EDIT key.
- Select the parameters you wish to modify and change their values.

A small dot will appear next to the display voice number when there is a data modification.

Voice number

The dot will appear when any data has been modified.

When you wish to hear what the original voice sounded like, press the <u>EDIT/COMPARE</u> key once again. The voice number will flash and the sound of the original voice will be reproduced (during this procedure, you can not modify data). Pressing the <u>EDIT/COMPARE</u> key will cause the DX7 to revert to the original voice. When you wish to continue your efforts in voice creation, press the <u>EDIT/COMPARE</u> key again. In this manner, you can compare your sound with that of the original voice in order to see how your voice is progressing.

2. Creating an Original Voice.

To create an entirely new voice, you can use one of the pre-programmed voices as the "raw material" for modification. However, the feed-back and LFO parameters can complicate the procedure and make things quite difficult. Therefore, it is advisable to use the "basic" voice parameters when beginning voice creation from scratch.

We'll create a CLARINET sound to exemplify this procedure.

1) Press the FUNCTION key to set the DX7 to the FUNC-TION mode.

Press VOICE INIT key. Next press the YES key. The display will then show "ARE YOU SURE?". Pressing the YES key once again will cause the voice data to be set to the basic settings, and the DX7 will exit the FUNC-TION mode and enter the EDIT mode. It is now ready to create new sounds.

2) Selecting the Algorithm

Choose one algorithm out of the 32 available. For example, we'll select Algorithm 3. Press the ALGORITHM key. Set the DATA ENTRY section to 3.

Set the respective values at the DATA ENTRY section.

ALG 3 111111 SELECT ALGOR

4) Store the edited voice in the internal memory. See the STORE/SAVE/LOAD section on page 19, and carry out the store procedures using it as a reference.

 Disable all OPERATORs that are not immediately necessary.

The carrier parameters should be defined first. The carriers for algorithm 3 are OPERATORs 1 and 4. As we will only be using OPERATORs 1 and 2 for this example, OPERATOR 1 will act as the sole carrier. First, set the output level of OPERATOR 1 to any value. Press the <u>OPERATOR OUTPUT LEVEL</u> key. Set OPERATOR 1 to 99. Set OPERATOR 2 to 70. The unused OPER-ATORs 3 through 6 should be set to 0. Pressing the <u>OPERATOR SELECT</u> key, select the OPERATORs. Disable all OPERATORs not immediately necessary. Press the OPERATOR ON-OFF keys 2 through 6. OPERATORs 2 through 6 are now disabled.

- 4) Determining the CARRIER FREQUENCY. When attempting to create the sound of a clarinet, the CARRIER versus MODULATOR frequency ratio should be set to 1:2. Press the FREQUENCY FINE and FREQUENCY COARSE keys, and set the pitch to 1.00.
- 5) Determining the amount of DETUNE.

In our attempt to create the sound of a clarinet, only OPERATOR 1 will be functioning as a carrier and therefore DETUNE should be set to 0. Press the DETUNE key. Set the value of "OSC DETUNE" to 0.

6) Setting the ENVELOPE GENERATOR.

First, we'll set the ENVELOPE GENERATOR of the carrier. For example, we'll set the parameters to the following values:

Pressing each key in succession will cause the values to advance from 1 to 4.

8) Setting the MODULATOR FREQUENCY Set the MODULATION FREQUENCY to 2.00 using the FREQUENCY COARSE and FREQUENCY FINE keys. Set the DETUNE for OPERATOR 2 to 0. Set the "OSC DETUNE" to 0 using the DETUNE key.

9) Setting the MODULATOR ENVELOPE GENERATOR.

To create the sound of a clarinet, the parameters of the modulator's envelope generator should be identical to the parameters of the carrier's envelope generator. This process can be carried out in a few seconds by using the COPY function. Using the COPY function, copy the OPERATOR 1 envelope generator data to OPERATOR 2. Set the display to "OP 1" by presseing the OPERATOR SELECT key.

While pressing the <u>STORE</u> key, press this key. The display will show the number of the operator that was selected with the <u>OPERATOR SELECT</u> key. This signifies that the envelope generator parameters, keyboaro level scaling and keyboard rate scaling parameters of OPERATOR 1 are being copied to OPERATOR 2.

Display will show the OP number that was selected with the OPERATOR SELECT key.

With the DX7 set in this mode, play on the keyboard and listen to the sound produced. The sound produced will be a pure sine wave from the carrier only. Now set the envelope of the carrier for an appropriate sound. Next, we'll set up the modulator data.

7) Using the modulator

In this attempt to create the sound of a clarinet, OPER-ATOR 2 will be functioning as the sole modulator. Press the OPERATOR 2 key. OPERATOR 2 is now engaged.

This signifies that the EG data of OP1 are being copied to OP2.

10) Adjusting Tone

At this point, listen to the sound. The sound produced will probably be a little harsh. In this case, lower the OUTPUT LEVEL of OPERATOR 2 by pressing on the OPERATOR SELECT key. While pressing on the OPERATOR OUTPUT LEVEL key, lower the value of the output level using the DATA ENTRY slide control. With an output level setting of 61, the sound produced will approach that of an actual clarinet. Let's set the output level of OPERATOR 2 to 61. Later on, with more careful control of the envelope generators of OPERATORs 1 and 2, you can tailor the sound more precisely for your requirements.

11) Adding Modulation

Let's add a vibrato effect to the clarinet sound produced. Set the modulation controls so that the MODULATION wheel can be used to add a subtle touch of vibrato.

1. Set the LFO Waveform.

Pressing the LFO WAVE key, set the wave form to "TRIANGLE".

2. Set the LFO Speed.

Pressing the SPEED key, set the LFO's speed to "28". This will produce a moderately slow vibrato.

3. Set the LFO DELAY.

Pressing the DELAY key, set the LFO DELAY to "36". The vibrato effect will begin a few seconds after a key is played.

- 4. The modulation controls should be set so that the vibrato effect will be controlled solely by the Modulation wheel. Pressing the PMD key, set the "LFO PM DEPTH" to "0". Pressing the AMD key, set the "LFO AM DEPTH" to "0". The setting for both OPERATORs 1 and 2 should be "0".
- 5. Set the MODULATION SENSITIVITY.

Pressing the PITCH key, set the "P MOD SENS" to "1". This means that the pitch will be modulated slightly by the LFO.

Pressing the <u>AMPLITUDE</u> key, set the "A MOD SENS" to "0". The settings for both OPERATORs 1 and 2 should be "0".

 Control the Vibrato Effect with the Modulation Wheel.
 Pressing the FUNCTION keys, set the DX7 to the FUNCTION mode. Set the Modulation Wheel RANGE.
 Pressing the MODULATION WHEEL RANGE key, set the RANGE to "33". This produces a slight amount of vibrato.

8. Turn PITCH ON, AMPLITUDE OFF.

Pressing the PITCH key, set the PITCH to "ON". This signifies that the modulation wheel controls the LFO modulation of the pitch.

Pressing the <u>AMPLITUDE</u> key, set the AMPLITUDE to "OFF".

9. Set the EG (Envelope Generator) BIAS to OFF. Pressing the EG BIAS key, set the EG BIAS to "OFF"

Now, by manipulating the MODULATION WHEEL, you should be able to control the amount of vibrato on the clarinet while playing.

12) Naming the New Voice

Nearly any name can be given to a VOICE, as long as it is within ten characters in length. As the sound produced here is close to that of an actual clarinet, let us call this VOICE: "CLARINET-A". Pressing the <u>EDIT/COMPARE</u> key, set the DX7 back to the EDIT mode. While pressing the <u>NAME</u> key, press the character keys in succession as shown in the figure. The cursor will move every time you write in a new character.

3) Saving Your Original Voice In Memory. Refer to the STORE/SAVE/LOAD section on page 19.

2-2. System exclusive information

2-2-1. MIDI active clock

This message usually requests reception regardless of MIDI channel number. When this clock is suspended longer than 666 msec (except for receiving the bulk data), the on-going sound turned OFF.

2-2-2. Bulk data of 1 voice

This message requests reception with the same format as transmission when MIDI channel numbers are corresponded, system information is available, and Memory protect is off.

2-2-3. Bulk data of 32 voices

This message requests reception with the same format as transmission when MIDI channel numbers are corresponded, system information is available, and Memory protect is off.

2-2-4. Parameter change

Voice parameter and function parameter request reception with the same format as transmission when MIDI channel numbers are corresponded, system information is available, and Memory protect is off.

2 - 2 - 5.

This message re	equests the performance data of the DX1 A-side.

VOICE LIBRARY with PERFORMANCE NOTES

You are encouraged to experiment with each voice in order to achieve the best sound. We have left many standard voices without performance recommendations, due to the possibility of your editing or changing to suit your own taste. Where necessary though, we have included some performance suggestions to enhance the sound as programmed by Yamaha Programmers.

1.NORMAL SYSTEM SETTING

First of all, we recommend that the FUNCTION parameters are set as a "NORMAL" system setting as follows:

parameters functions	RANGE	рітсн	AMPLI- TUDE	EG BIAS	Notes
MODULATION	60 - 80	ON	OFF	OFF	This setting is for vibrato.
FOOT CONTROL	99	OFF	OFF	OFF	For some sounds the Foot Controller will function like a "wah" pedal with the EG BIAS on.
BREATH CONTROL	99	OFF	OFF	OFF	Using the BC1 Breather Controller with the EG BIAS on, you can get the same effect as the FOOT CONTROL.
AFTER TOUCH	99	OFF	OFF	OFF	Same effect as the MODULATION WHEEL with the PITCH on.

POLY/MONO & PORTAMENTO

POLY/MONO POLY PORTAMENTO MODE FOLLOW PORTAMENTO TIME 0

* Some voices like bass or lead sounds are better played in a following setting:

PITCH BEND

RANGE 7 STEP 0

2. PERFORMANCE NOTES

ROM-1 A MASTER GROUP

No.	Voice Name	Performance Notes			Play lightly and staccato to hear the chimes only. Play full chords for		
1	BRASS 1	Very touch sensitive.			orchestra.		
2	BRASS 2	Normal.	26	TUBULAR	Normal.		
3	BRASS 3	Normal.		BELLS			
4	STRINGS 1	Touch sensitive but otherwise normal.	27	STEEL DRUM	Normal.		
5	STRINGS 2	Normal.	28	TIMPANI	Best drum sounds are around middle C.		
6	STRINGS 3	Hard bowed sound. Staccato playing preferred.			Hold note down for damped drum. Play staccato for drum ''ring''.		
7	ORCHESTRA	Normal.	29	REFEREE'S	Normal. Same whistle with any key.		
8	PIANO 1	Normal.	30	HUMAN	Manual Classestaria		
9	PIANO 2	Sound like bottom-end of grand plano so large chords sound best.		VOICE 1	Normal. Slow attack so wait for sound to come in.		
10	PIANO 3	Honkey-tonk plano.	31	TRAIN	Be sure that all EG BIAS controls are		
11	ELECTRIC PIANO 1	Normal.		- 17 J. P.	turned OFF, otherwise you won't hear the steam train. The alternative is to use BC1 with BREATH CONTROL EG		
12	GUITAR 1	Jazz Guitar		1.	BIAS on to bring in steam sound.		
13	GUITAR 2	May be more effective used in MONO mode with some FINGERED porta- mento.			Play middle C and F sharp above for whistle. Bell can be played anywhere on top octave. Gets guieter toward		
14	SYNTH LEAD	Fat synth lead sound. Better in MONO mode with some portamento.	32	TAKE OFF	middle of keyboard. Normal. Hold sustain pedal and play note(s), then release sustain pedal and sound "takes off".		
15	BASS 1	Better in MONO mode with some portamento.					
16	BASS 2	Better in MONO mode with some portamentc.	1.12.22	She har the second second	BOARD & PLUCKED		
17	ELECTRONIC ORGAN 1	Normal.	SO	UNDS GROU	IP		
18	PIPE ORGAN	Normal.	No.	Voice Name	Performance Notes		
	1		1	PIANO 4	Normal.		
19	HARPSI- CHORD 1	Normal.	2	PIANO 5	Normal. Softer, upright-type sound.		
20	CLAV 1	Very touch sensitive.	3	ELECTRIC PIANO 2	"Dirtier" electric piano sound.		
21	VIBE 1	Normal.	4	ELECTRIC	Normal.		
10000	MARIMBA	Normal. Play staccato.		PIANO 3			
22			· · ·	FIESTOIC	AND STATES		
22	кото	Normal. Play Japanese scale for better feel.	5	ELECTRIC PIANQ 4	Normal.		

7	CELESTE	Normal.
8	TOY PIANO	Better in high octaves.
9	HARPSI- CHORD 2	Normal.
10	HARPSI- CHORD 3	Normal.
11	CLAV 2	Heavy touch sensitivity.
12	CLAV 3	Like ensemble clav.
13	ELECTRONIC ORGAN 2	Normal.
14	ELECTRONIC ORGAN 3	Heavy touch sensitivity.
15	ELECTRONIC ORGAN 4	Some touch sensitivity.
16	ELECTRONIC CRGAN 5	60's organ sound.
17	PIPE ORGAN 2	Small pipes sound.
18	PIPE ORGAN 3	Normal.
19	PIPE ORGAN 4	Larger pipes sound.
20	CALIOPE .	Normal.
21	ACCORDION	Normal.
22	SITAR	Normal.
23	GUITAR 3	Spanish guitar sound.
24	GUITAR 4	Folk guitar sound.
25	GUITAR 5	12 string guitar sound. Use sustain pedal.
26	GUITAR 6	Short plucked effect. More like balalaika sound.
27	LUTE	Normal.
28	BANJO	Staccato playing best.
29	HARP 1	Normal.
30	HARP 2	Normal. Like Celtic harp.
31	BASS 3	Fretless bass sound. Should be played in MONO mode with some FINGERED portamento.
32	BASS 4	Wooden bass sound.

	and the second se	and the second	-		quite ok in normal.
No.	Voice Name	Performance Notes	16	SYNTH BASS 2	Same as SYNTH BASS 1.
1	PICCOLO	Normal.	17	HARP&FLUTE	Pluck quickly to hear only harp. Sustai
2	FLUTE 2	Normal.	1-10	DELLOCIUTE	to bring out flute.
3	OBOE	Normal.	18		Normal.
4	CLARINET	Normal.	19	ELECTRIC PIANO&	Be sure that all EG BIAS controls are
5	SAXOPHONE (BC1)	Blow to express saxophone using BC1. EG BIAS on. Use MODULATION WHEEL for vibrato.		BRASS (BC1)	turned off, or use BC1 with BREATH CONTROL EG BIAS on to bring in brass sound. Brass can be brought in even after piano fades out.
		Saxophone can be played without using BC1 by turning BREATH CONTROL EG BIAS off.	20	TUBULAR EXPANSION	Hold note for expanded tubular bell.
6	BASSOON	Normal.	21	CHIME & STRINGS	Ghostly sound. Hold note for string sound.
7	STRINGS 4	2-octave strings.	22	BASS DRUM	
8	STRINGS 5	Very slow attack.	1 22	& SNARE	Bass drum at bottom end of keyboard, snare at top.
9	STRINGS 6	Normal. Heavy touch sensitivity.	23	SHIMMER	Normal.
10	STRINGS 7	Strings in 5th.	24	EVOLUTION	Hold chord to hear sound grow.
11	STRINGS 8	Pizzicato strings. "Pluck" notes.	25	WATER	Hold sustain pedal and play few notes
12	BRASS 4	Ensemble-like brass sound.	1	GARDEN	wait for more notes.
13	BRASS 5	Brass in 5th.	26	WASP STING	Normal. Play quick notes. Notes can be
14	BRASS 6 (BC1)	Same as SAXOPHONE (BC1).			held for arrival of wasp army.
15	BRASS 7	Good for solo trombone sound in MONO mode with some FINGERED	27	LASER GUN	Hit any note. Hold several notes at bottom of keyboard for more action.
		portamento.	28	DESCENT	Use sustain pedal and "tap" a group of
	BRASS 8	Tuba sound.		CONTANT	notes.
17	RECORDER	Nice sound if just two lines-melody	29		Normal.
18	LIA DAACANUCA A	and counter melody-are played.	30	GRAND PRIX	Normal. Use sustain pedal. Tap some notes—one after the other—around
1.0	HARMONICA 1				middle of keyboard to hear racing cars
19	HARMONICA 2 (BC1)	Express harmonica using BC1 with BREATH CONTROL EG BIAS on. You get some tremolo.			start up. Release sustain pedal to stop sound.
20	HUMAN VOICE 2	Normal.	31	ST. HELENS	Once started sound builds up and becomes very loud. For explosion
21	HUMAN VOICE 3	Slow-attack voice.	1		after build-up press preset key 32. ST. HELENS sound can only be stopped by switching to another preset.
22	GLOCKEN- SPIEL	Normal.	32	EXPLOSION	Tap notes lightly. Different sound depending on how notes are played.

23	VIBE 2	Normal.
24	XYLOPHONE	Normal.
25	CHIMES	Triplet sound for each note played.
26	GONG 1	Full gong sound with sustain pedal. Play harder for louder gong.
27	GONG 2	Smaller gong sound. Sustain pedal not needed.
28	BELLS	Play octave above middle C.
29	COWBELL	Normal, Play percussively.
30	BLOCK	Normal. Play percussively.
31	FLEXATONE	Touch any note very quickly.
32	LOG DRUM	Normal, Play percussively.

ROM-2 B SYNTH, COMPLEX & EFFECTS SOUNDS GROUP

17	PIPE ORGAN 2	Small pipes sound.			
18	PIPE ORGAN 3	Normal.	No.	Voice Name	Performance Notes
19		Larger pipes sound.	1	SYNTH LEAD 2	These voices would benefit from being
20	CALIOPE	Normal.	2	SYNTH LEAD 3	played in MONO mode with FINGER
21	ACCORDION	Normal.	3	SYNTH LEAD 4	ED portamento and TIME around 40

3.HOW TO PLAY PRE-PROGRAMMED VOICES

Playing the Internal Voices

The DX7 has 32 internal voices, any one of which can be selected simply by pressing the INTERNAL key in the MEMORY SELECT group, and then by pressing the appropriate VOICE SELECT key.

Each VOICE SELECT key has a large numeral that corresponds to the voice number at its left edge.

Playing the Cartridge Voices

An extra 64 voices can be added to the available selection simply by plugging in one of the supplied external voice cartridges.

Insert a cartridge as shown in the figure.

Select the cartridge voices by first pressing the CARTRIDGE key in the MEMORY SELECT group, and then select the desired voice by pressing the appropriate VOICE SELECT key, just as in internal voice selection. Selection of cartridge voice groups A1 - A32 and B1 - B32 is accomplished using the selector switch on the cartridge.

The A voice bank, voices A1 through A32 of the cartridge memory can be used.

Select the cartridge voices

and then press the voice select key corresponding to the number of the desired voice.

VOICE LIBRARY with PERFORMANCE NOTES

You are encouraged to experiment with each voice in order to achieve the best sound. We have left many standard voices without performance recommendations, due to the possibility of your editing or changing to suit your own taste. Where necessary though, we have included some performance suggestions to enhance the sound as programmed by Yamaha Programmers.

1.NORMAL SYSTEM SETTING

First of all, we recommend that the FUNCTION parameters are set as a "NORMAL" system setting as follows:

parameters functions	RANGE	рітсн	AMPLI- TUDE	EG BIAS	Notes
MODULATION WHEEL	60 - 80	ON	OFF	OFF	This setting is for vibrato.
FOOT CONTROL	99	OFF	OFF	OFF	For some sounds the Foot Controller will function like a "wah" pedal with the EG BIAS on.
BREATH	99	OFF	OFF	OFF	Using the BC1 Breather Controller with the EG BIAS on, you can get the same effect as the FOOT CONTROL.
AFTER TOUCH	99	OFF	OFF	OFF	Same effect as the MODULATION WHEEL with the PITCH on.

POLY/MONO & PORTAMENTO

POLY/MONO POLY PORTAMENTO MODE FOLLOW PORTAMENTO TIME 0

* Some voices like bass or lead sounds are better played in a following setting:

· PITCH BEND

RANG	E											7
STEP				×.	×							0

3.HOW TO PLAY PRE-PROGRAMMED VOICES

Playing the Internal Voices

The DX7 has 32 internal voices, any one of which can be selected simply by pressing the INTERNAL key in the MEMORY SELECT group, and then by pressing the appropriate VOICE SELECT key.

Each VOICE SELECT key has a large numeral that corresponds to the voice number at its left edge.

Playing the Cartridge Voices

An extra 64 voices can be added to the available selection simply by plugging in one of the supplied external voice cartridges.

Insert a cartridge as shown in the figure.

Select the cartridge voices by first pressing the CARTRIDGE key in the MEMORY SELECT group, and then select the desired voice by pressing the appropriate VOICE SELECT key, just as in internal voice selection. Selection of cartridge voice groups A1 – A32 and B1 – B32 is accomplished using the selector switch on the cartridge.

The A voice bank, voices A1 through A32 of the cartridge memory can be used.

1 A1-32

Supplied voice ROM cartridge

The B voice bank, voices B1 through B32 of the cartridge memory can be used.

> Select the cartridge voices MEMORY SELECT

and then press the voice select key corresponding to the number of the desired voice.
